CHANGE CURRENT WORKING DIRECTORY	
ACTORS <ul style="list-style-type: none"> Final User File Management System 	REQUIREMENT FR_09: The system must allow changing the current working directory.
DESCRIPTION The system file tree has a current working directory, it is a current selected folder where certain functions will be applied, for example if the user executes the option "Create New File" in the file menu, the new file will be a direct child of the current working directory. The system allows the current working directory to be changed by clicking on any folder in the file tree.	
PRECONDITIONS <ul style="list-style-type: none"> A folder must have been chosen as the root of the file tree. 	
NORMAL FLOW <ol style="list-style-type: none"> The user will click a folder in the rendered file tree. The clicked folder will be the new working directory. 	
POSTCONDITIONS The current working directory is the clicked folder by user.	
NOTAS <ul style="list-style-type: none"> Clicking on a folder in the file tree not only changes the current working directory, it also expands or compresses the directory.
