EDIT FILE CONTENT	
ACTORS ● User ● File Editing Module	**REQUIREMENT** FR_7 – The system must allow editing files.
DESCRIPTION This use case defines the interaction where a user edits the content of an existing file. The editor provides a text area where users can freely insert, modify, or delete text, with support for standard editing features like undo, redo, line numbering and tab size.	
PRE-CONDITIONS ● A file must be opened successfully. ● The file must be writable.	
NORMAL FLOW 1. The user opens a file. 2. The user interacts with the editor interface (typing, deleting, pasting text). 3. The editor dynamically updates the content view. 4. The file is saved.	
POST-CONDITIONS ● The modified content is reflected in memory and on disk (after saving). ● The system may notify that the file has been saved successfully.	
NOTES ● The editor should indicate current unsaved changes.
